WORK EXPERIENCE

Technical Product Designer

September 2025 – June 2026

SkillCat

New York, NY

- Defined SkillCat's product strategy from "certification-first" to a full trades career journey, shaping the roadmap and core experiences to drive longer-term retention and engagement
- Led end-to-end interaction design and development for the redesigned learning journey, collaborating with backend and technical support teams to align user goals and technical constraints
- Redesigned the B2B manager dashboard experience by revamping the prototype with Claude Code, introducing new user flows, and delivering updated specs for developer handoff

Product Designer

June 2025 – September 2025

ScriptChain Health

New York, NY

- Led product design for both patient and provider portals aimed at reducing metabolic syndrome with personalized wellness plans, including prototyping out user flows and motion graphic videos
- Collaborate with machine learning engineers, stakeholders, and patients to balance user flows, ensuring data driven design decisions aligned with medical goals and regulatory requirements

Product Designer

January 2024 – August 2024

Co.Lab

New York, NY

- Collaborated with product managers and developers to design and develop a platform that allows users to generate a custom career roadmap based on their learning requirements and long term goals
- Integrated OpenAI's Assistant API to personalize user recommendations, optimizing for performance, scalability; reducing latency by 51% from the original time

Software Engineer

April 2022 – October 2022

JPMorgan Chase & Co.

New York, NY

- Utilized React and TypeScript to refactor front-end components for the retail Chase web application
- Designed custom privileges and navigations for rendering components using JavaScript, HTML, and CSS
- Collaborated with UX designers to assess design feasibility and improve user flows and interactions.

PROJECTS

Nocta (Case Study)

Spring 2025

A mobile app that provides actionable insights for patients with sleep apnea on CPAP therapy

- Designed and coded an end-to-end mobile app that transforms complex CPAP data into personalized, actionable insights to improve user confidence and long-term therapy compliance
- Interviewed sleep apnea patients and sleep medicine experts to explore why people aren't diagnosed with sleep apnea, why cpap compliance is so low, and what people think of the current CPAP apps.
- Utilized OpenAI to generate insights and guidance based on patient data and sleep apnea data

EDUCATION

Parsons School of Design | Masters in Communication Design (Digital Product Design)

Spring 2025

University at Buffalo | Bachelors of Science in Business Administration
